## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 to 47, drawn to a structural component comprising a metallic matrix and a plurality of nanoparticles, classified in class 420, subclass 1+.
  - II. Claims 48 to 56, drawn to a method of making a bulk nanocomposite comprising providing a nanocomposite powder and a metallic matrix, consolidating the nanocomposite powder and thermomechanically processing the nanocomposite powder to form the bulk nanocomposite classified in class 419, subclass 1+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process, such as for example electrodeposition, composite electroless deposition, etc.
3. While it is noted that claims 14 to 47 are product-by-process claims and incorporate process steps, a product defined by the process by which it can be made is

Art Unit: 1742

still a product claim (In re Bridgeford, 149 USPQ 55 (CCPA 1966)) and can be restricted from the process if the product as claimed can be made by another materially different process such as the alternative process described above. See In re Brown, 173 U.S.P.Q 685, and In re Fessmann, 180 U.S.P.Q. 324, for analysis of weight given to process step recitations in product claims also see MPEP 2113 and 806.05(f).

4. Because these inventions are independent or distinct for the reasons given above, because the inventions require a different field of search and because the inventions have acquired a separate status in the art in view of their different classification there would be a serious burden on the examiner if restriction is not required, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

6. The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

7. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 1742

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
